Session 3

1. Create a file and use `chmod` to set it to `rwx`.

```
naman@naman-virtualbox:~/shell_scripts$ touch adobe.txt
naman@naman-virtualbox:~/shell_scripts$ chmod u+x adobe.txt
naman@naman-virtualbox:~/shell_scripts$ chmod g-r  adobe.txt
naman@naman-virtualbox:~/shell_scripts$ chmod g-w  adobe.txt
naman@naman-virtualbox:~/shell_scripts$ chmod o-r  adobe.txt
naman@naman-virtualbox:~/shell_scripts$ ls -l adobe.txt
-rwx------ 1 naman naman 0 Mar  6 00:43 adobe.txt
```

2. Create another file and change its owner using `chown`.

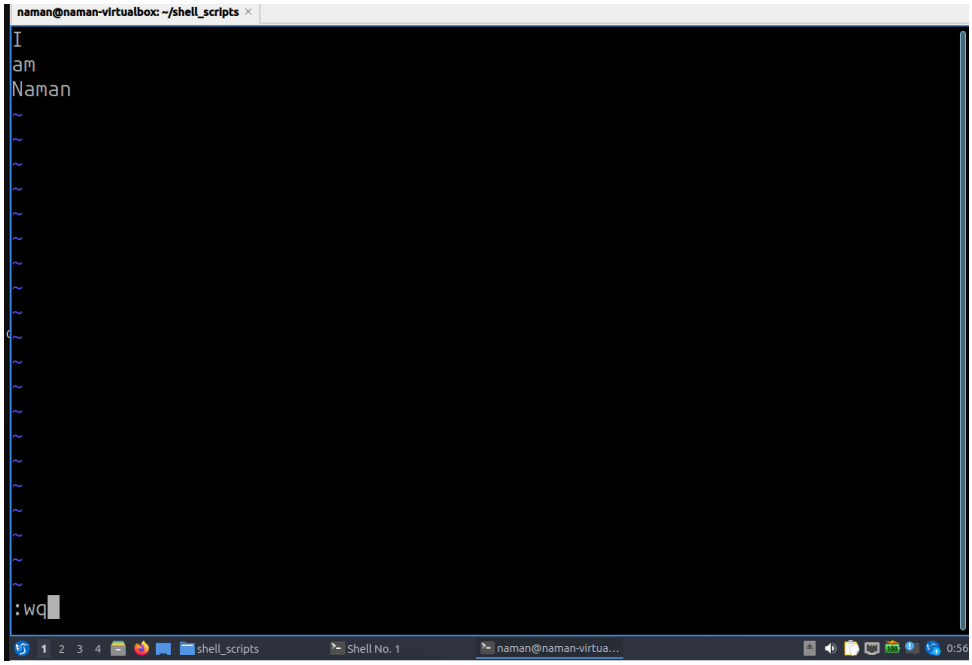
```
naman@naman-virtualbox:~/shell_scripts$ touch united.txt
naman@naman-virtualbox:~/shell_scripts$ sudo chown intern united.txt
```

3. Create a group and assign file access using `chgrp`.

```
naman@naman-virtualbox:~/shell_scripts$ sudo groupadd bdabatch
[sudo] password for naman:
naman@naman-virtualbox:~/shell_scripts$ sudo chgrp bdabatch united.txt
```

4. Open a file in `vi`, insert text, save, and quit.

naman@naman-virtualbox:~/shell_scripts$ vi adobe.txt



5. In `vi`, use find and replace to change a word in the file.
